I only want to die. No brain. I have got a big hole in my brain's place. All brain is fried, I don't know what to do. Please help me. I have got neurotoxicity. It is irreversible and never will heal. Never. All brain and body is damaged. My last med totally killed me.

Please try to understand how I'm ill. Really dying. I tried suicide a million times. Nothing help. I hate my own family.

We are ill, more thousand people, ver ill. Everybody need to must research and must find treatment. And what is the reason my illness. I can't tolerate anymore what valdoxan made with me.

I can't feel where is my head and all thoughts is deleted. It was enough. Total. I'm alone in this world.

I know that recovery from meds caused brain damage is more difficult than recovery from other brain damage example stroke. But I want to be myself again and want to back all my memory and brain. I hope miracle can happen.

I beg for my death all day all minute. I only blink all day. Can't find my head. No brain to kill myself. I can't think absolutely. I'm sever mad and vegetative. Noone know treatment. No treatment. It's not withdrawal.
