

RURAL ECONOMY AND CONNECTIVITY COMMITTEE

SALMON FARMING IN SCOTLAND

SUBMISSION FROM THE RIVER DEVERON DISTRICT SALMON FISHERY BOARD

We note that the current presumption against development on the north and east coast of Scotland was discussed at the Committee meeting of 18th April. We support the presumption against further finfish farm development on the north and east coasts of Scotland to help safeguard migratory fish species. We also support the position of Fisheries Management Scotland that the current regulatory system does not sufficiently protect wild fish and we consider that a new regulatory system should be put in place prior to any growth in consented biomass.

The north and east coast of Scotland includes 12 rivers designated at SACs for Atlantic salmon or where Atlantic salmon is a qualifying feature in site selection. The marine migration routes for these fish are largely unknown. Whilst some research has been completed, or is currently underway as part of strategic research relating to offshore wind farms, the risk of potential impacts from open pen sea cages on Atlantic salmon and sea trout populations is currently too high. We note that these concerns were also highlighted in the ECCLR Committee report and we support the view that 'in order to mitigate the risk of transfer of sea-lice, fish farms should be located away from salmon migration routes'.
